ANDROID & FULL-STACK DEVELOPER | FRESHER

Android and full-stack developer who builds and ships production-ready applications using Kotlin(XML), Django, Flutter, React and Spring Boot. Experienced in API design, database integration, containerization and cloud deployment using Docker, Render, Netlify, NeonDB, and Cloudinary.

TECHNICAL SKILLS

Programming Languages: Python, Kotlin, Dart, Java, C, C++

Mobile Developments: Android (Kotlin, Java, XML), Flutter

Web Frameworks: Flutter, React, Django, Spring Boot

Databases: SQL, SQLite, PostgreSQL (NeonDB)

DevOps, Cloud & Deployment: Docker, Render, Netlify, Cloudinary

Tools & Platforms: Git, GitHub, Jupyter Notebook, VS Code, WSL

PROFESSIONAL EXPERIENCE

Freelance Full-Stack Developer

[NOV/2025] - [DEC/2025]

- Developed a **paid, client-facing application** for plant disease detection using **deep learning-based image classification**.
 - Built a **Flutter mobile application** that allows users to **upload plant leaf images** and view disease prediction results.
 - Implemented a **Django backend** to receive uploaded images, run model inference, and return classification results via REST APIs.
 - Integrated a **CNN-based image classification model** to classify plant leaves into **Healthy, Powdery Mildew, and Rust Disease** categories.
 - Used **Cloudinary** for image storage and **PostgreSQL (NeonDB)** for managing application data.
 - Tested APIs using **Postman** and deployed backend services in a cloud environment.
-

ACADEMIC PROJECTS

1. Firewall Application with URL Scanner (VPN-Based)

- Developed an **Android firewall application** using the **Android VPN service** to monitor and control network traffic at the application level.

- Implemented **URL scanning and rule-based filtering** to identify potentially unsafe or suspicious links.
- Added a **threat logging module** to record detected URLs, with logging enhancements currently under development.
- Designed and integrated a **VPN-based traffic handling mechanism** to route network requests through the application.
- Built a clean and user-friendly interface using **XML layouts** and followed Android best practices.

2. On-Device Facial Emotion Recognition System

- Developed an **Android application for real-time facial emotion recognition** using a deep learning-based approach.
- Integrated **Google ML Kit Face Detection** for accurate face localization from camera input.
- Implemented a **CNN-based emotion classification model** trained to recognize **Happy, Sad, Angry, and Surprise** emotions.
- Designed a complete on-device inference pipeline: **camera capture → face detection → face cropping and preprocessing → emotion prediction**.
- Optimized the model for **on-device inference using TensorFlow Lite**, enabling fast and offline emotion detection.
- Utilized **CameraX** for camera integration and efficient frame processing.

3. Library Management Application

- Developed a **Library Management System** to manage books, members, and issued records using a modern Android stack.
- Built a **clean and responsive UI** using **Jetpack Compose** and **Material Design 3**.
- Implemented **MVVM architecture** using **ViewModel** and **Repository** patterns to ensure separation of concerns and maintainable code.
- Used **Room Database** for local data storage, enabling offline access and persistent data management.
- Implemented book issuing and tracking functionality with proper data validation.
- Added a **“No Internet” handling screen** to improve user experience in offline scenarios.

EDUCATION

Bachelor of Technology in Artificial Intelligence & Data Science

V.V. College of Engineering, Tisaiyanvilai | 2024 – 2028

CERTIFICATIONS

- **Typewriting English** – Government of Tamil Nadu Department of Technical Education
 - **Advanced Diploma in Python Programming**–CSC
 - **Programming in Java**-Kalvi
 - **SQL Server** – Kalvi
-

SOFT SKILLS

- Problem-Solving
 - Team Collaboration
 - Self-Learning & Adaptability
 - Attention to Detail
 - Time Management
 - Communication & Requirement Understanding
 - Debugging & Troubleshooting Mindset
-

PRACTICAL EXPERIENCES

- Performed **static analysis of Android applications** using **JADX GUI** to inspect application structure, permissions, and security-relevant code paths.
 - Analyzed **APK components** (activities, services, broadcast receivers, content providers) to understand application behavior and identify potential **attack surfaces**.
 - Examined **API usage and client-side logic** to identify insecure implementations such as hardcoded secrets, exposed endpoints, and weak validation mechanisms.
 - Conducted **ethical penetration testing activities** in controlled environments using **Kali Linux**, applying reconnaissance and vulnerability identification techniques.
 - Intercepted and analyzed **application network traffic** to evaluate authentication flows and client–server communication behavior (where applicable).
 - Used **Unity Engine** to understand **game development fundamentals**, including scene management, game object lifecycles, scripting basics, and asset integration.
 - Gained practical exposure to the **Unity Android build process**, understanding how Unity projects are packaged into Android APKs.
-
